Noboni Sultan

New York, NY • Portfolio • Github • LinkedIn

TECHNOLOGIES

Languages: JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frameworks & Libraries: React, Node.js, Express.js, Knex.js, PostgreSQL, REST APIs, Vite
Tools & Concepts: Git, GitHub, VS Code, Postman, TablePlus, Chrome DevTools, OOP, Data Structures & Algorithms, Agile/Scrum
AI Tools: Claude, Gemini API, Groq API, GitHub Copilot

SOFTWARE PROJECTS

Arrear Live Demo | Github Repo **Aug 2026 - Present**

A full-stack platform that helps clinics recover missed government incentive revenue by scanning Electronic Medical Record (EMR) data, flagging qualifying care for human review, and tracking submissions.

- Built a full-stack clinical revenue recovery platform (Node.js, Express, PostgreSQL, React) that scans EMR data using scheduled SQL detection rules to surface missed government incentive submissions, directly applying API design, database architecture, and process automation to a real-world business problem.
- Deployed frontend to Cloudflare Workers and backend to Render with a Neon PostgreSQL database; structured the project with a clean separation of models, controllers, services, and routes for maintainability and future scaling.
- Engineered a clinical revenue recovery platform that runs scheduled SQL rules across 18,000+ de-identified patient records to flag missed MIPS and HCC incentive submissions.

Bengal Bowls Live Demo | Github Repo **Aug 2025 - Present**

A full-stack food ordering platform for a real world client, customers can browse menus, place orders, and manage purchases through a responsive web app.

- Built a full-stack food ordering platform (React, Express.js, PostgreSQL) for a real world client, end-to-end, from scoping through deployment, independently learning and implementing user authentication, relational data storage, and payment integration.
- Designed and implemented RESTful APIs to manage menu items, customer orders, and user accounts, connecting the React frontend with a PostgreSQL database to support seamless ordering and data management.
- Collaborated directly with the Founder and CEO to define project scope, align on product vision, prioritize feature requirements, and establish technical specifications.

EXPERIENCE

The Marcy Lab School - Applied AI Engineering Residency – Backend Tech Lead **Brooklyn, NY | Jul 2026**

Compass Live Demo | Github Repo

A civic-tech virtual classroom platform designed to make learning more interactive and accessible through AI-powered tutoring and real-time communication between students and instructors. Collaborated with members of Civics Unplugged to define the product vision, identify user needs, and establish feature requirements aligned with the platform's educational goals.

- Led backend architecture for a civic-tech virtual classroom app, authored schema design, wireframes, and API contracts to align the full team before any code was written, then implemented PostgreSQL tables for classes, enrollment, and session data.
- Integrated Groq and Google Gemini APIs with engineered prompts to build a Socratic AI chatbot, and implemented real-time WebSocket connections for live classroom signal updates between students and instructors.

ADDITIONAL EXPERIENCE

Hollis Drugs and Surgicals | Pharmacy Assistant **Hollis, NY | Jul 2026 - Present**

- Identified prescription refill issues and communicated actionable next steps to patients, coordinating with healthcare providers when necessary.
- Assisted with prescription processing, medication preparation, and customer pickups while following established procedures to minimize errors.

PROFESSIONAL DEVELOPMENT

The Marcy Lab School | Career Launch Accelerator Program Participant **Brooklyn, NY | Sep 26 - Mar 27**

- Participated in a six month long Software Engineering professional development program including 24 weeks of Python instruction, leading weekly code challenges, attending panels with industry professionals, and visiting employer sites.
- Strengthened technical problem-solving and communication skills through coursework in data structures, algorithms, and system design, alongside technical interview preparation and communication training.

EDUCATION

The Marcy Lab School - Software Engineering Fellowship **Brooklyn, NY | Sep 2025 - Aug 2026**

- Completed 2,000+ hours of intensive coursework in computer science fundamentals, leadership development, and full-stack web application development using the PERN stack.

Western Governors University - Network Engineering **Salt Lake City, UT | Jul 2024 - Aug 2025**

Relevant Coursework: Web Development Foundations, Introduction to Systems Thinking, Network Analytics and Troubleshooting, Network and Security Foundations, Linux Foundations, Critical Thinking and Reasoning, and Ethics in Technology.
